

CANADIAN INTERPROFESSIONAL HEALTH COLLABORATIVE NATIONAL COMPETENCY FRAMEWORK

Competencies Overview

COMPETENCIES OVERVIEW

The Winnipeg Regional Health Authority believes in and supports the role of interprofessional education and collaborative practice in improving the quality of healthcare.

Known as Collaborative Person-Centred Care and Services, this process has been linked to desirable outcomes that include improved quality of care, safer care, better access to care and enhanced satisfaction with care.

Interprofessional collaboration requires effective working relationships among every member of a person's healthcare team across multiple professions, and involves the person and the person's family.

Collaborative practice requires trust and respect for every member of that person's team, with everyone working together to ensure an optimal healthcare outcome.

The National Interprofessional Competency Framework developed by the Canadian Interprofessional Health Collaborative (CIHC) identifies six competencies required for effective Collaborative Person-Centred Care and Services:

- 1. Person-Centred Care**
- 2. Role Clarification**
- 3. Team Functioning**
- 4. Collaborative Leadership**
- 5. Interprofessional Communication**
- 6. Interprofessional Conflict Resolution**
